

HAVE YOU HAD COVID-19?

SDSU Psychology Department
is recruiting young adults aged 18-30 for a

Brain Imaging Study

The study will examine the after-effects of COVID-19 on the brain and its interactions with alcohol consumption.

Qualified participants will be interviewed and will be asked to complete a battery of questionnaires online (up to 40 min total). They will take part in an electroencephalography (EEG) recording at the Spatio-Temporal Brain Imaging Lab and a magnetic resonance (MRI) scanning session at SDSU Imaging Center (~3hrs). They will be contacted again after 4 months with follow-up questionnaires (~20 min).

Participants will receive \$25/hr + bonus for completing the study

Participants must be 18 - 30 yrs old, right-handed, able to have an MRI, have had a verifiable COVID-19 diagnosis not requiring hospitalization

If interested, please contact Dr. Ksenija Marinkovic or her associates at psych.STBIL@sdsu.edu
