DO YOU HAVE CHRONIC SPINE PAIN?

SDSU Researchers are recruiting adults ages 18-65

for a Chronic Pain and the Brain Study

Approved
SDSU IRB
12-Jul-2022

The study will examine the impact of chronic neck or low back pain on cognitive and neural functions

We are looking for participants who:

1) are currently experiencing neck or low back pain that has limited their daily activities for 3 or more months in a single episode or across multiple episodes, OR

2) have no history of a chronic pain condition or any episodes of pain in the past year that have limited daily activities or required pain medication

Qualified participants will be interviewed (~15 min) and will be asked to complete a battery of questionnaires (up to 40 min total). They will take part in an electroencephalography (EEG) recording (~1hr 20 min) and a magnetic resonance (MRI) scanning session at SDSU (~1.5 hrs).

Participants will receive 25$/hr for participating in the study.

Participants must be 18 - 65 yrs old, right-handed, able to have an MRI. Women who wish to participate cannot be pregnant or lactating.

If interested, please contact Drs. Katrina Maluf or Ksenija Marinkovic at (619) 594-5553 or psych.STBIL@sdsu.edu
